

Table of Contents

Preface

Formulae and abbreviations

A Basic Problems

| | | |
|----------|--|-----------|
| 1 | Principles of Vector Orientation and Structure of a Vector Orientated Controlled System Using Three-Phase AC Machines | 1 |
| 1.1 | Formation of the space vectors and its vector orientated philosophy | 1 |
| 1.2 | Basic structures of field-orientated control for three-phase AC drives | 6 |
| 1.3 | Basic structures of grid voltage orientated control for DFIM generators | 11 |
| 1.4 | References to chapter 1 | 15 |
| 2 | Inverter Control with Space Vector Modulation | 17 |
| 2.1 | Principle of vector modulation | 18 |
| 2.2 | Calculation and output of the switching times | 23 |
| 2.3 | Restrictions of the procedure | 26 |
| 2.3.1 | Actually utilizable vector space | 26 |
| 2.3.2 | Synchronization between modulation and signal processing | 28 |
| 2.3.3 | Consequences of the protection time and its compensation | 29 |
| 2.4 | Realization examples | 31 |
| 2.4.1 | Modulation with microcontroller SAB 80C166 | 33 |
| 2.4.2 | Modulation with digital signal processor TMS 320C20/C25 | 37 |
| 2.4.3 | Modulation with double processor configuration | 45 |
| 2.5 | Special modulation procedures | 49 |
| 2.5.1 | Modulation with two legs | 49 |
| 2.5.2 | Synchronous modulation | 51 |
| 2.5.3 | Stochastic modulation | 53 |
| 2.6 | References to chapter 2 | 58 |
| 3 | Machine Models as Prerequisite to Design Controllers and Observers | 61 |
| 3.1 | General issues of state space representation | 61 |
| 3.1.1 | Continuous state space representation | 61 |
| 3.1.2 | Discontinuous state space representation | 63 |
| 3.2 | Induction machine with squirrel-cage rotor (IM) | 69 |
| 3.2.1 | Continuous state space models of the IM in stator-fixed and | 70 |

II

| | | |
|----------|---|-----|
| | field-synchronous coordinate systems | |
| 3.2.2 | Discrete state space models of the IM | 78 |
| 3.3 | Permanent magnet excited synchronous machine (PMSM) | 85 |
| 3.3.1 | Continuous state space model of the PMSM in the field synchronous coordinate system | 85 |
| 3.3.2 | Discrete state model of the PMSM | 88 |
| 3.4 | Doubly-fed induction machine (DFIM) | 90 |
| 3.4.1 | Continuous state space model of the DFIM in the grid synchronous coordinate system | 90 |
| 3.4.2 | Discrete state model of the DFIM | 93 |
| 3.5 | Generalized current process model for the two machine types IM and PMSM | 95 |
| 3.6 | Nonlinear properties of the machine models and the way to nonlinear controllers | 97 |
| 3.6.1 | Idea of the exact linearization | 98 |
| 3.6.2 | Nonlinearities of the IM model | 100 |
| 3.6.3 | Nonlinearities of the DFIM model | 102 |
| 3.6.4 | Nonlinearities of the PMSM model | 103 |
| 3.7 | References to chapter 3 | 105 |
| 4 | Problems of Actual-Value Measurement and Vector Orientation | 107 |
| 4.1 | Acquisition of the current | 108 |
| 4.2 | Acquisition of the speed | 110 |
| 4.3 | Possibilities for sensor-less acquisition of the speed | 116 |
| 4.3.1 | Example for the speed sensor-less control of an IM drive | 118 |
| 4.3.2 | Example for the speed sensor-less control of a PMSM drive | 125 |
| 4.4 | Field orientation and its problems | 127 |
| 4.4.1 | Principle and rotor flux estimation for IM drives | 128 |
| 4.4.2 | Calculation of current set points | 134 |
| 4.4.3 | Problems of the sampling of operation of the control system | 135 |
| 4.5 | References to chapter 4 | 139 |
| B | Three-Phase AC Drives with IM and PMSM | |
| 5 | Dynamic Current Feedback Control for Fast Torque Impression in Drive Systems | 143 |
| 5.1 | Survey about existing current control methods | 144 |
| 5.2 | Environmental conditions, closed loop transfer function and control approach | 155 |
| 5.3 | Design of a current vector controller with dead-beat behaviour | 159 |

| | | |
|----------|--|------------|
| 5.3.1 | Design of a current vector controller with dead-beat behaviour with instantaneous value measurement of the current actual-values | 159 |
| 5.3.2 | Design of a current vector controller with dead-beat behaviour for integrating measurement of the current actual-values | 163 |
| 5.3.3 | Design of a current vector controller with finite adjustment time | 165 |
| 5.4 | Design of a current state space controller with dead-beat behaviour | 167 |
| 5.4.1 | Feedback matrix \mathbf{K} | 168 |
| 5.4.2 | Pre-filter matrix \mathbf{V} | 169 |
| 5.5 | Treatment of the limitation of control variables | 172 |
| 5.5.1 | Splitting strategy at voltage limitation | 174 |
| 5.5.2 | Back correction strategy at voltage limitation | 180 |
| 5.6 | References to chapter 5 | 182 |
| 6 | Equivalent Circuits and Methods to Determine the System Parameters | 185 |
| 6.1 | Equivalent circuits with constant parameters | 186 |
| 6.1.1 | Equivalent circuits of the IM | 186 |
| 6.1.1.1 | T equivalent circuit | 186 |
| 6.1.1.2 | Inverse Γ equivalent circuit | 188 |
| 6.1.1.3 | Γ equivalent circuit | 189 |
| 6.1.2 | Equivalent circuits of the PMSM | 190 |
| 6.2 | Modelling of the nonlinearities of the IM | 191 |
| 6.2.1 | Iron losses | 191 |
| 6.2.2 | Current and field displacement | 194 |
| 6.2.3 | Magnetic saturation | 198 |
| 6.2.4 | Transient parameters | 204 |
| 6.3 | Parameter estimation from name plate data | 204 |
| 6.3.1 | Calculation for IM with power factor $\cos\phi$ | 205 |
| 6.3.2 | Calculation for IM without power factor $\cos\phi$ | 208 |
| 6.3.3 | Parameter estimation from name plate of PMSM | 210 |
| 6.4 | Automatic parameter estimation for IM in standstill | 211 |
| 6.4.1 | Pre-considerations | 211 |
| 6.4.2 | Current-voltage characteristics of the inverter, stator resistance and transient leakage inductance | 213 |
| 6.4.3 | Identification of inductances and rotor resistance with frequency response methods | 215 |
| 6.4.3.1 | Basics and application for the identification of rotor | 215 |

| | | |
|----------|---|------------|
| | resistance and leakage inductance | |
| 6.4.3.2 | Optimization of the excitation frequencies by sensitivity functions | 217 |
| 6.4.3.3 | Peculiarities at estimation of main inductance and magnetization characteristic | 219 |
| 6.4.4 | Identification of the stator inductance with direct current excitation | 221 |
| 6.5 | References to chapter 6 | 223 |
| 7 | Online Adaptation of the Rotor Time Constant for IM Drives | 225 |
| 7.1 | Motivation | 225 |
| 7.2 | Classification of adaptation methods | 231 |
| 7.3 | Adaptation of the rotor resistance with model methods | 235 |
| 7.3.1 | Observer approach and system dynamics | 236 |
| 7.3.2 | Fault models | 239 |
| 7.3.2.1 | Stator voltage models | 239 |
| 7.3.2.2 | Power balance models | 242 |
| 7.3.3 | Parameter sensitivity | 244 |
| 7.3.4 | Influence of the iron losses | 249 |
| 7.3.5 | Adaptation in the stationary and dynamic operation | 251 |
| 7.4 | References to chapter 7 | 254 |
| 8 | Optimal Control of State Variables and Set Points for IM Drives | 257 |
| 8.1 | Objective | 257 |
| 8.2 | Efficiency optimized control | 258 |
| 8.3 | Stationary torque optimal set point generation | 261 |
| 8.3.1 | Basic speed range | 261 |
| 8.3.2 | Upper field weakening area | 265 |
| 8.3.3 | Lower field weakening area | 269 |
| 8.3.4 | Common quasi-stationary control strategy | 272 |
| 8.3.5 | Torque dynamics at voltage limitation | 275 |
| 8.4 | Comparison of the optimization strategies | 279 |
| 8.5 | Rotor flux feedback control | 282 |
| 8.6 | References to chapter 8 | 285 |
| 9 | Nonlinear Control Structures with Direct Decoupling for Three-Phase AC Drive Systems | 287 |
| 9.1 | Existing problems at linear controlled drive systems | 287 |
| 9.2 | Nonlinear control structure for drive systems with IM | 288 |
| 9.2.1 | Nonlinear controller design based on "exact linearization" | 289 |

| | | |
|-----------|---|------------|
| 9.2.2 | Feedback control structure with direct decoupling for IM | 293 |
| 9.3 | Nonlinear control structure for drive systems with PMSM | 295 |
| 9.3.1 | Nonlinear controller design based on "exact linearization" | 295 |
| 9.3.2 | Feedback control structure with direct decoupling for PMSM | 298 |
| 9.4 | References to chapter 9 | 300 |
| C | Wind Power Plants with DFIM | |
| 10 | Linear Control Structure for Wind Power Plants with DFIM | 301 |
| 10.1 | Construction of wind power plants with DFIM | 301 |
| 10.2 | Grid voltage orientated controlled systems | 303 |
| 10.2.1 | Control variables for active and reactive power | 304 |
| 10.2.2 | Dynamic rotor current control for decoupling of active and reactive power | 305 |
| 10.2.3 | Problems of the implementation | 308 |
| 10.3 | Front-end converter current control | 309 |
| 10.3.1 | Process model | 310 |
| 10.3.2 | Controller design | 312 |
| 10.4 | References to chapter 10 | 314 |
| 11 | Nonlinear Control Structure with Direct Decoupling for Wind Power Plants with DFIM | 315 |
| 11.1 | Existing problems at linear controlled wind power plants | 315 |
| 11.2 | Nonlinear control structure for wind power plants with DFIM | 316 |
| 11.2.1 | Nonlinear controller design based on "exact linearization" | 316 |
| 11.2.2 | Feedback control structure with direct decoupling for DFIM | 319 |
| 11.3 | References to chapter 11 | 323 |
| 12 | Appendices | 325 |
| 12.1 | Normalizing - the important step towards preparation for programming | 325 |
| 12.2 | Example for the model discretization in the section 3.1.2 | 328 |
| 12.3 | Application of the method of the least squares regression | 330 |
| 12.4 | Definition and calculation of Lie derivation | 334 |
| 12.5 | References to chapter 12 | 335 |
| | Indices | 337 |
